Introduction to Projections

Using Projections Data

Projections contained in these tables provide information for estimating job opportunities, developing training programs, and gaining insight into employment trends. However, before reaching any final conclusions, users should consider the following:

Remember that these data are estimates. They were developed on the assumption that historical trends will continue into the future. However, events may occur during the seven-year projection period that are impossible to predict. Events such as military base closures, major business closures or openings, and natural disasters can have a major impact on employment levels.

Do not use these projections as your sole source of information. Use other more recent sources of local economic data to corroborate the projection data. This information may be found in documents such as those published by the EDD's Labor Market Information Division, local chambers of commerce or economic development agencies.

Projections employment data are annual averages. These averages may not accurately portray seasonal occupations or industries such as those found in agriculture, retail sales, recreation and construction.

Employment levels stated reflect workers who are covered by the Unemployment Insurance program. As a result, industries that are made up largely of individuals who are self-employed will be understated. Examples include industries such as real estate, hair salons and bookkeeping. Occupations such as dental hygienists and consultants will also show an understated level of employment.

Industry Projections

Projections by industry forecast the anticipated changes within an industry over time. Forecasts are based on past employment trends and then are refined by a review of current economic developments.

Industry employment projections utilize employment data from both the Current Employment Statistics (CES) program and the Employment Payroll (ES202) program. There is a certain amount of error built into both systems. These errors may include employers classified in the wrong industry, incorrect employment levels reported by the employer and employment reported in the wrong county.

If a major industry category shows a decrease in future employment, it may be that only one or two industry components are experiencing the decline and other components are still expected to hire new workers. It is best to investigate all sectors of the industry. For example, retail trade has several components: building materials and garden supplies; general merchandise stores; food stores; automotive dealers and service stations; and apparel and accessory stores, to name a few.

Geographical differences account for differing employment opportunities. If an individual is considering relocating from one area of the state to another, the size of the industry and its expected growth level need to be kept in mind. Small rural counties will not have the same employment possibilities as do the larger metropolitan areas.

Knowing Future Industry Trends

- helps economic development professionals foster compatible growth and promote an area's strengths.
- helps government agencies, non-profit agencies, researchers and other interested parties formulate plans and proposals.
- helps people seeking work and those doing counseling and/or job placement learn about employment opportunities in various industries.

Occupational Projections

Projections by occupation estimate the changes in occupational employment over time resulting from industry growth. Changes in the number, size and type of employers within a geographical area will affect the demand for certain occupations. Also, technological advances or changes in laws or regulations may affect the occupational mix.

General changes in the work place affect some occupations. Jobs may be created, eliminated or consolidated due to restructuring or regulations affecting the requirements for the job. For example, personal computers and word processing programs eliminated many typist jobs, but created a need for word processors.

An occupational title does not give details about the occupation. An individual starting a career search may want to look at the various occupations in this module, choose any that are of interest and then do further research. There are other sources of information for

occupations and their specifics, such as skills and educational requirements, hourly earnings, benefits, working conditions and advancement opportunities.

Occupational staffing patterns used for the projections process are developed from the annual OES Survey of employers. The survey utilizes a sample of the entire universe of Unemployment Insurance (UI) covered employers. Because it is a survey, it is important that the following points be considered:

- There is inherent statistical error as a result of both the sampling process and the level of employer response to the survey mailings.
- OES staffing patterns may contain errors due to problems employers may have in completing the survey. These errors typically include: misunderstanding of survey instructions, misinterpretation of occupational definitions and/or titles contained on the forms, and clerical errors in filling out the forms.
- The employer's response to the survey may reflect conditions that are atypical. They may be experiencing a temporary shutdown, seasonal high or low employment, or a temporary increase in demand for their product or service.

Occupational projections data indicate major occupations and which occupations are likely to offer the greatest number of job opportunities. When possible, the user should focus on larger groups rather than specific occupations. Some occupations may not appear in published tables because of the low number of people employed in that area or because of confidentiality concerns.

Although an occupation may be stable and not expected to grow, this does not mean that there are no opportunities for employment. All occupations have turnover opportunities. Individuals change or leave jobs permanently for varying reasons. High turnover, especially in occupations requiring lower skill levels, would mean that there are frequent openings even though there is little or no growth.

Occupational projections data are prepared for employment and training planners, vocational educators, and others who need information on future employment by occupation. The outlook information can be used in making occupational training decisions and career choices. Employers considering expansion or relocation may find the data helpful in understanding the occupational composition and trends in California and its 58 counties.

Additional Sources of Information

Additional information on economic conditions in a particular area can be accessed through Labor Market Information Division consultants, who provide information about economic activities within the counties they serve, and EDD One Stop locations, where additional publications and information may be obtained. Other sources include:

- Wage And Salary Employment by Industry
- Occupational Outlook Handbook (BLS)
- California Occupational Guides
- California Association for Local Economic Development
- Chambers of Commerce
- Economic Development Organizations
- Newspapers
- Standard Industrial Classification Manual

Automated Access

Electronic access to current data is available through the EDD's Internet address at:

www.calmis.ca.gov

For information about the Web site or to order publications, please call (916) 262-2162.

Description of Projection Tables

Employment includes nonagricultural wage and salary workers, except for self-employed persons, unpaid family workers, private household workers, and those involved in labor-management trade disputes. An **industry division** refers to a distinct group of private, public or nonprofit enterprises engaged in producing goods or providing services. With the exception of government, industries are classified by the Standard Industrial Classification (SIC) system. Industries are then grouped into ten major categories according to the economic activity involved:

Agriculture, Forestry, and Fishing includes establishments primarily engaged in agricultural production, forestry, commercial fishing, hunting and trapping, and related services.

Mining includes all establishments involved in the extraction of minerals, crude petroleum and natural gas, including quarrying, milling and related activities.

Construction includes establishments engaged in contract construction, including new work, additions, and repairs performed by general and special trade contractors.

Manufacturing includes establishments which are usually described as plants, factories or mills engaged in producing or processing nondurable or durable goods. These typically use power-driven machines and material-handling equipment.

Transportation and Public Utilities includes enterprises engaged in passenger and freight transportation by surface, water and air, warehousing and other transportation services. It also includes the communications complex of telephone, telegraph, radio and television; and the utilities providing gas, electric and sanitary services.

Wholesale Trade includes establishments involved in selling merchandise to industrial, commercial, farm, construction contractors and professional businesses; retailers; or other wholesalers.

Retail Trade includes establishments involved in the selling of merchandise for personal or household consumption and rendering services incidental to the sale of goods.

Finance, Insurance, and Real Estate includes banks, savings and loan institutions and security and commodity brokerages, insurance agencies and carriers, real estate

sales and management offices, and rental and planning agencies.

Services includes establishments such as hotels, laundries, auto repair shops, theaters, legal services, advertising services, private schools and hospitals, and nonprofit organizations which are engaged in rendering a variety of services to individuals and businesses.

Government includes legislative, judicial, administrative and regulatory activities of federal, state, local and international governments; and federal, state and local government hospitals and education. Note also, for the federal government sector, employment includes all civilian employees regardless of the activities in which they are engaged.

Industry Tables

Employment By Major Industry (Table 1) This table shows 2001 estimated employment and 2008 projected employment along with the percentage of total employment for each major industry division.

Employment By Industry (Table 2) This table shows estimated employment for 2001 and projected employment by industry for 2008. The SIC code for each group is also listed. The "Employment Change" columns provide the projected change in employment between 2001 and 2008 and the percent change or growth rate over the seven-year period.

Occupations are classified on the basis of work performed and required skills, education, training, or credentials. Based on the Standard Occupational Classification (SOC) system, workers are classified at four levels of aggregation: major group; minor group; broad occupation; and detailed occupation. All occupations are clustered into one of the following 23 major occupation groups:

- *Management*
- *Business and Financial Operations*
- *Computer and Mathematical*
- *Architecture and Engineering*
- *Life, Physical, and Social Science*
- *Community and Social Services*
- *Legal*

- *Education, Training, and Library*
- *Arts, Design, Entertainment, Sports, and Media*
- *Healthcare Practitioners and Technical*
- *Healthcare Support*
- *Protective Service*
- *Food Preparation and Serving and Serving Related*
- *Building and Grounds Cleaning and Maintenance*
- *Personal Care and Service*
- *Sales and Related*
- *Office and Administrative Support*
- *Farming, Fishing, and Forestry*
- *Construction and Extraction*
- *Installation, Maintenance, and Repair*
- *Production*
- *Transportation and Material Moving Operations*
- *Military Specific Operations*

Occupational Tables

Employment by Occupational Group (Table 3) This table shows 2001 and 2008 employment and projected employment for major occupational groups. The "Absolute Change" column gives the number of job opportunities resulting from the creation of new jobs. "Percent Change" shows the percentage change for each occupational group.

Occupations with the Greatest Job Growth (Table 4) This table lists the 50 occupations that are projected to register the largest numerical change between 2001 and 2008. In general, these occupations are numerically large. Some have average projected rates of growth, but because of their employment size will add significant numbers of new jobs over the 2001–2008 period.

Occupations with the Fastest Job Growth (Table 5) This table lists the 50 occupations with the greatest projected percentage increases, providing a different perspective to future occupational employment changes. Please note that some of these are increasing rapidly from relatively small employment levels and not necessarily found in Table 4.

Occupational Employment Projections (Table 6) This table provides occupational detail for up to 800 occupations. Annual average employment in each occupation is shown for 2001 and 2008. The column headed "Number" under

employment change presents the number of job opportunities resulting from the creation of new jobs. The "Percent" column shows the percentage change for each occupation. The next column, "Separations," shows job opportunities that are created by workers leaving the occupation.

Also included in this table is a codes column, showing the California SOC code for each occupational title. The Alphabetical Index of Occupations section may be used to locate occupations in the detailed table.

Occupations With The Most Openings (Table 7) This table lists the occupations projected to register the largest absolute growth and separations between 2001 and 2008.

Occupations With Projected Job Loss (Table 8) This table lists the occupations projected to decline over the 2001–2008 period. Declining employment is a sign that the occupation has no growth. However, turnover may result in some job opportunities.

Industry Trends and Outlook

The Employment Development Department (EDD) projects an increase of 76,800 nonfarm jobs at firms located in Santa Clara County between 2001 and 2008. Significant job cutbacks and a slow recovery in the early part of the outlook period will reduce local job growth to about one-third of that enjoyed during 1993–2001. Nevertheless, the projected employment gain represents an average growth rate of 1.1 percent per year for the 2001–2008 period. More than 80 percent of the employment gain will occur in the services industry division. Retail trade payrolls will see significant increases. The construction, government and transportation and public utilities industry divisions, along with the finance, insurance and real estate industry division, will show slight job additions. The manufacturing industry division will exhibit a decreasing trend, and wholesale trade jobs will dip slightly. Mining will remain stable over the projection period. (Please note that the department does not include agriculture in this analysis.)

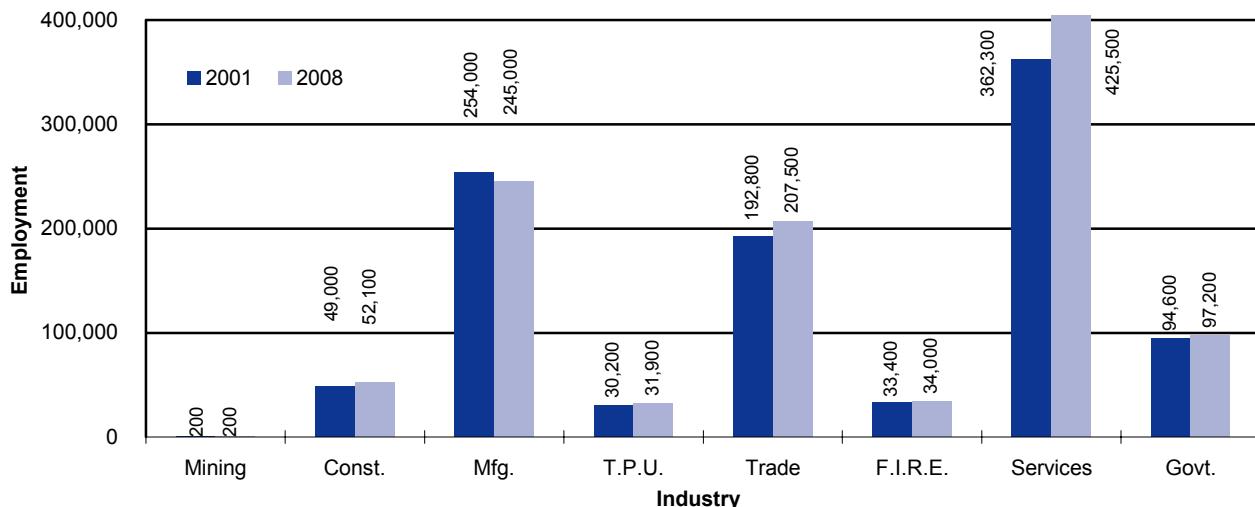

Services, the largest industry division in Santa Clara County, will add the greatest number of jobs (63,200) for a 17.4 percent growth rate over the 2001–2008 projection period. Business services will produce more than half of the services gain. More than 80 percent of the business services expansion of 35,700 jobs will occur in computer programming, information retrieval and other computer-related services, and in temporary and contract help agencies. However, building cleaning, maintenance and

pest control, as well as guard and security systems services, will also show significant job growth. Health services will post an additional 7,300 jobs during the outlook period, with the largest increases concentrated in hospitals, doctors' offices and clinics. Engineering and management services—which also includes architectural, accounting and research firms—should see an increase of 5,000 jobs between 2001 and 2008. Private educational services will register a gain of 2,900 jobs. Meanwhile, the hotel/motel and amusement industries are projected to add 1,700 jobs combined. Miscellaneous other services industries will grow significantly over the seven-year period, chiefly in legal services; auto repair, services and parking; religious organizations; landscape and horticultural services; residential care; and child day care services.

Retail trade employment will expand by 15,300 jobs, or 10.9 percent, between 2001 and 2008. Restaurants and bars will account for more than 40 percent of the gain in retail jobs. Grocery stores will add 1,200 jobs. Other types of retail firms will show some job additions during the projection period.

Construction employment will grow by 3,100 jobs between 2001 and 2008. Special trade contractors—such as those performing electrical, plumbing, heating and air conditioning work will yield more than two-thirds of the added construction jobs.

**Employment by Major Industry
2001–2008**

Government employment should see a slight increase of 2,600 jobs (2.7 percent overall) during the seven-year period. Local government, excluding public schools, will account for most of the public sector increase, with budget problems causing slower additions than would normally occur to meet the needs of a growing population. The very modest job gains projected in local education and state education should more than offset a decrease in federal jobs.

The **transportation and public utilities** industry division should rise by 1,700 jobs, for a net 5.6 percent increase over the outlook period. Communications will account for more than half of that gain. Electric, gas and sanitary services, as well as transportation, will contribute smaller additions.

Finance, insurance and real estate payrolls will show a small expansion of 600 jobs, or 1.8 percent, between 2001 and 2008. Real estate and insurance jobs will account for more than 80 percent of the increase, with a very slight gain expected in finance.

Manufacturing should continue to contract overall and will lose 9,000 jobs, or 3.5 percent, during the projection

period. Although the electronic equipment industry (which includes semiconductor production) will regain some of its local jobs lost in the early part of the outlook period, the industry will remain 10,200 jobs below its 2001 figure in 2008. Primary and fabricated metal firms will lose 1,200 jobs, while food processing will shed 800 jobs. Somewhat offsetting this downward trend, industrial machinery (which includes computer and office equipment) will add 1,900 jobs. The chemicals and allied products industry is expected to grow by 1,200 jobs, and instruments will net 800 jobs. Part of the gains in both chemicals and instrument manufacturing will be related to growth in the biomedical field.

Wholesale trade will dip by 600 jobs between 2001 and 2008. Two-thirds of the decrease will occur in durable goods, which dominates the wholesaling business in Santa Clara County. The nondurable wholesale trade sector will experience a slight job decline.

Mining employment will not change between 2001 and 2008.

Table 1: Employment by Major Industry¹
2001 – 2008
Santa Clara County

Industry	2001 ²	Percent of Total	2008	Percent of Total
Total Nonfarm	1,016,500	100.0%	1,093,300	100.0%
Mining	200	0.0%	200	0.0%
Construction	49,000	4.8%	52,100	4.8%
Manufacturing	254,000	25.0%	245,000	22.4%
Transportation and Public Utilities	30,200	3.0%	31,900	2.9%
Trade	192,800	19.0%	207,500	19.0%
Finance, Insurance, and Real Estate	33,400	3.3%	34,000	3.1%
Services	362,300	35.6%	425,500	38.9%
Government	94,600	9.3%	97,200	8.9%

¹Employment and projections contained in these tables are considered estimates (see introduction for a full explanation of data limitations). Employment is reported by place of work and excludes self-employed persons, unpaid family workers, domestics, volunteers, and those involved in labor-management trade disputes. These data are based on 1987 Standard Industrial Classifications. Annual average industry detail may not add up to totals due to independent rounding. Government data include all civilian government employees regardless of the activities in which they are engaged.

Government data include all civilian government employees regardless of the activities in which they are engaged.

²March 2001 benchmark.

Occupational Trends and Outlook

Job growth or decline is influenced by the overall level of economic activity in a given area; that is, when economic activity refers to the overall economic growth or decline of industries and/or changes in occupation distributions within individual industries. Each area's economic climate influences the growth or decline of occupations that account for a large number of jobs within that area. In contrast, occupations with a small number of workers grow or decline as a result of the growth or decline of their specific industries.

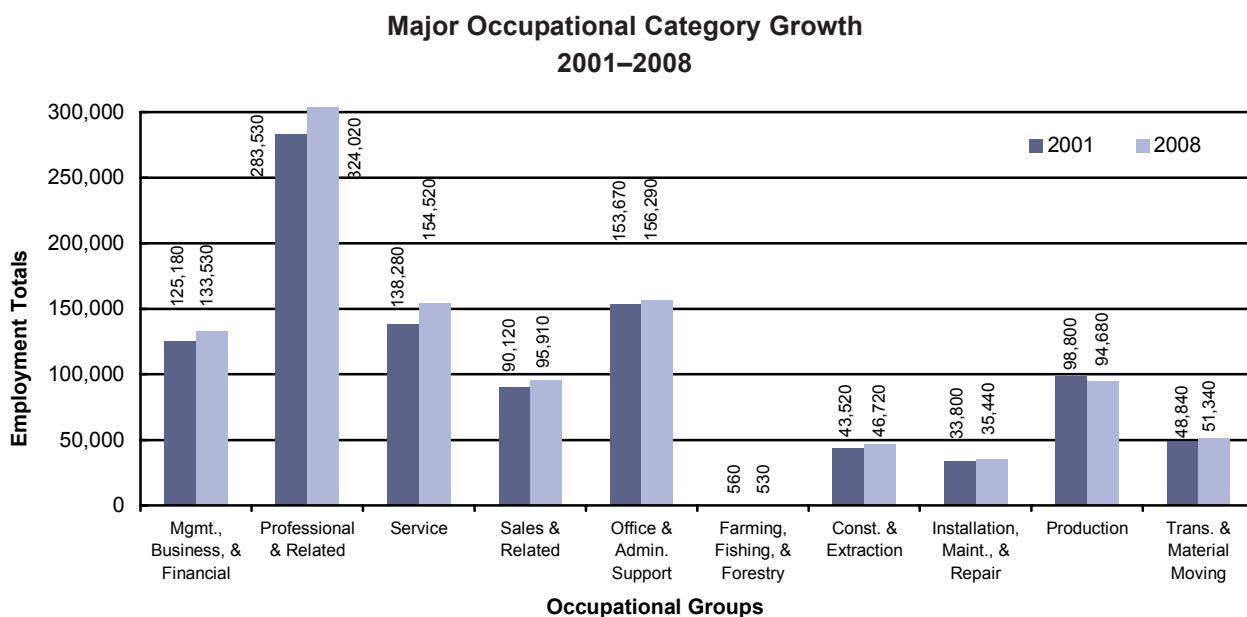

This section provides a discussion of major trends for occupation categories shown in **Table 6: Occupational Employment Projections** (beginning on page D-18). Projected changes in the level of employment in each occupation are an estimate of new job openings expected over a seven-year period. Separations, an estimate of the number of people leaving the workforce or an occupation, accounts for additional job openings. These estimates do not include job openings that are a result of people who change jobs but stay in the same occupation.

Santa Clara County

In 2001, Santa Clara County had a total of 1,016,500 workers employed in all industries. Employment projections call for that number to reach 1,093,300 by 2008. This represents an annual growth rate of 1.1 percent, a rate below the 2.2 percent rate projected for California as a whole. Separations will add another 165,800 job openings.

The largest occupational group in 2001 in Santa Clara County was *professional and related occupations*. Professional and related occupations employed 283,530 persons in 2001 and is projected to grow to 324,020 jobs by 2008, a 14.3 percent growth rate or 40,490 new jobs. The second-largest occupational group was *office and administrative support occupations* with employment of 153,670 in 2001. This group is expected to add 2,620 new jobs to reach 156,290 by 2008, a 1.7 percent growth rate. The third-largest group was *service occupations* with 2001 employment of 138,280 and expected growth of 11.7 percent or 16,240 jobs to a 2008 total of 154,520. The fastest growing group is *professional and related occupations* with a growth rate of 14.3 percent followed by *service occupations* at a 11.7 percent growth rate.

The occupation with the greatest growth is computer software engineers (systems software), up 7,980 jobs (see **Table 4: Occupations with the Greatest Job Growth**). These jobs are found mostly at computer and data processing services; computer and office equipment; electronic components and accessories; engineering and architectural services; and measuring and controlling devices. *Computer software engineers (applications)* is also up 7,940 jobs, and are found in computer and data processing services; computer and office equipment; engineering and architectural services; electronic components and accessories; and measuring and controlling devices. Third is *computer support specialists* with growth

Occupational Trends and Outlook

of 4,880 new jobs, located in computer and data processing services; computer and office equipment; communications equipment; electronic components and accessories; and professional and commercial equipment. Fourth is *combined food preparation and serving workers (including fast food)* up 3,310 jobs, largely employed in eating and drinking places; grocery stores; miscellaneous shopping goods stores; miscellaneous amusement; recreation services; and retail bakeries. *Retail salespersons* will add 2,630 new jobs, primarily in department stores; miscellaneous shopping goods stores; family clothing stores; radio, television, and computer stores; lumber and other building materials.

The fastest growing occupation will be *computer support specialists*, up 44.6 percent (see **Table 5: Occupations with the Fastest Job Growth**). This occupation will be found mostly in computer and data processing services; computer and office equipment; communications equipment; electronic components and accessories; and professional and commercial equipment. The second-fastest growing occupation is *network and computer systems administrators*, which is up 43.4 percent. This occupation is employed mostly in computer and data processing services; electronic components and accessories, engineering and architectural services; research and testing services; and computer and office equipment. *Computer software engineers (applications)* will be up 39.1 percent in employment by 2008. These jobs work mostly in computer and data processing services; computer and

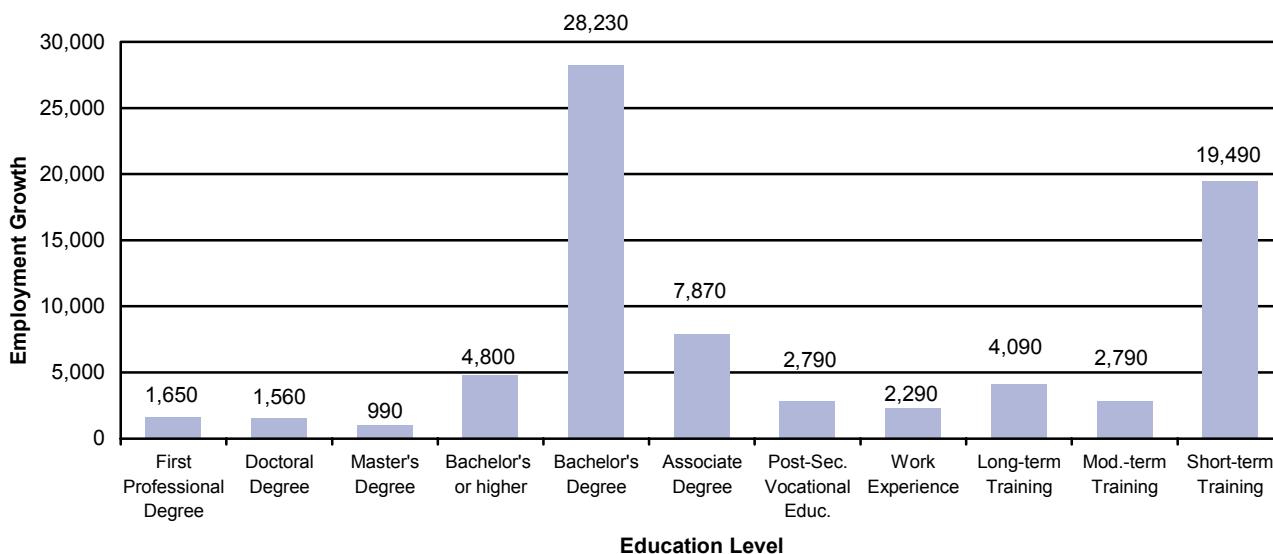

office equipment; engineering and architectural services; electronic components and accessories; and measuring and controlling devices. *Computer software engineers (systems software)* will be up 34.8 percent by 2008, working predominately in computer and data processing services; computer and office equipment; electronic components and accessories; engineering and architectural services; and measuring and controlling devices. Next is *social and human services assistants*, which will increase 34.6 percent, with employment in individual and family services; local government (except hospitals and education); residential care; and social services (not elsewhere classified).

Training

The greatest number of new jobs (28,230 or 36.7 percent) in Santa Clara County will require a **bachelor's degree**. The next largest number of new jobs (19,490 or 25.3 percent) will require **short-term on-the-job training**. Some 7,870 or 10 percent of all the new jobs will require an **associate's degree**. **Bachelor's or higher and work experience** positions are projected to increase by 4,800 or 6.2 percent.

The chart below displays the number of new jobs by education and experience levels. For more detailed descriptions of training levels, refer to the definitions on the following page.

**Employment Growth by Education and Experience Levels
2001–2008**

Training Level Definitions

Occupational training and education classifications were developed by the Bureau of Labor Statistics to improve on prior classification systems that did not distinguish between occupations with comparable educational requirements. For example, neither carpenters nor laborers require formal education beyond high school, but the complexity of the work and the training time required results in carpenters being placed in the long-term on-the-job training category and laborers placed in the short-term on-the-job training category. Of course there is more than one way to qualify for a job. In this classification system, the education and training required reflects the manner in which most workers become proficient in that occupation and the preferences of most employers.

First professional degree (1)

Occupations that require at least two years of full-time academic study beyond a bachelor's degree (for example, law, medicine, dentistry and clergy).

Doctoral degree (2)

Occupations that require at least three years of full-time academic study beyond a bachelor's degree, culminating in a doctoral degree.

Master's degree (3)

Occupations that require the completion of a master's degree program, which is usually one to two years beyond a bachelor's degree.

Bachelor's or higher, some work experience (4)

Occupations that generally require work experience in an occupation requiring a bachelor's or higher degree. Most occupations in this category are managerial occupations that require work experience in a related non-managerial occupation.

Bachelor's degree (5)

Occupations that require the completion of at least 4, but not more than 5 years, of full-time academic study beyond high school resulting in a Bachelor's degree.

Associate degree (6)

Occupations that require the completion of at least 2 years of full-time academic study beyond high school.

Post-secondary vocational education (7)

Occupations that require completion of vocational school training.

Work experience (8)

Occupations that require skills obtained through work experience in a related occupation.

Long-term on-the-job training (9)

Occupations that require more than 12 months of on-the-job training or combined work experience and formal classroom instruction for workers to develop the skills needed for average job performance.

Moderate-term on-the-job training (10)

Occupations in which workers can develop average job performance after 1 to 12 months of combined on-the-job experience and informal training.

Short-term on-the-job training (11)

Occupations in which workers can develop skills needed after a short demonstration or up to one month of on-the-job experience and instruction.

Standard Industrial Classification

The Standard Industrial Classification (SIC) is a nationally standardized system for identifying and coding business establishments according to their industrial activity. An "establishment" is an economic unit, generally located at a single physical location, where business is conducted or where services or industrial operations are performed. The Standard Industrial Classification (SIC) Manual is the reference guide used to accurately apply and/or understand the classification coding system.

The SIC Manual's format separates industries into ten broad divisions, such as manufacturing and retail trade. Within those broad groupings are more specific two-digit codes, as well as more detailed three-digit and four-digit codes, that identify specific industries. Brief narratives describe the kinds of establishments contained in each classification category.

Suggestions for Users

The SIC Manual facilitates the collection, analysis and publication of information about business establishments. This standardized system is used throughout the United States to promote uniformity in the publications of private and governmental agencies. The Employment Development Department's field office personnel use the manual to assign SIC codes to employers to aid in providing services. Trade associations and private industry use the manual in reference books, such as the California Manufacturers Register.

The manual can help one to understand the composite industries summarized in publications. However, all public sector workers are usually grouped together into a category called "government", which includes federal, state and local government, and state and local education.

The U.S. Department of Labor, Occupational Safety and Health Administration provides SIC information on the Internet at:

www.osha.gov

The SIC Manual may be purchased from U.S. Government Bookstores, Bureau of Labor Statistics, or the Superintendent of Documents in Los Angeles or San Francisco. For information about purchasing this manual, contact:

U.S. Government Bookstore
Marathon Plaza, Room 141-S

Standard Occupational Classification (SOC)

The Standard Occupational Classification (SOC) 1998 System was developed in response to a growing need for a universal occupational classification system—a system which would allow government agencies and private industry to produce comparable data. The SOC system was designed to cover all occupations in which work is performed for pay or profit and will be used by all federal agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data.

Data collected by the 2000 Census of Population will be coded to the 1998 SOC; the Department of Labor's Occupational Information Network (O*NET), adheres to the 1998 SOC. In fact, all federal government agencies that collect occupational data are expected to adopt the 1998 SOC over the next few years.

General Characteristics of the Revised SOC

This system classifies workers at four levels of aggregation:

- major group
- minor group
- broad occupation
- detailed occupation

All workers are classified into one of over 820 occupations, according to their occupational definition. To facilitate classification, all occupations are clustered into one of 23 major groups. Within these major groups, there are 96 minor groups, and 449 broad occupations. Each broad occupation includes detailed occupation(s) requiring similar job duties, skills, education, or experience.

The following example shows the hierarchical structure of the 1998 SOC:

19-0000 Life, physical, and social science occupations (*major group*)

19-000 Life scientists (*minor group*)

19-1020 Biological scientists
(*broad occupation*)

19-1021 Biochemists and biophysicists
(*detailed occupation*)

19-1022 Microbiologists
(*detailed occupation*)

19-1023 Zoologists and wildlife biologists
(*detailed occupation*)

19-1029 Biological scientists, all other
(*detailed occupation*)

Additional information, updated revision plans, and information on the implementation of the 1998 SOC are available at the Bureau of Labor Statistics (BLS) Internet site:

www.bls.gov/soc/socguide.htm

North American Industry Classification System (NAICS)

The United States has a new industry classification system. The North American Industry Classification System (NAICS) will soon replace the U.S. Standard Industrial Classification (SIC) system.

The first-ever North American Industry classification system, NAICS was developed by the U.S., Canada and Mexico to provide comparable statistics across countries. For the first time, government and business analysts will be able to directly compare industrial production statistics collected and published in the North American Free Trade Agreement countries.

NAICS will reshape the way we view our changing economy. It is a unique, all-new system for classifying business establishments. It is the first economic classification system to be constructed based on a single economic concept. Economic units that use like processes to produce goods or services are grouped together. This "production-oriented" system means that statistical agencies in the United States will produce data that can be used for:

- measuring productivity, unit labor costs, and the capital intensity of production;
- constructing input-output relationships and;
- estimating employment-output relationships and other such statistics that require that inputs and outputs be used together.

NAICS responds to increasing and serious criticism about the SIC. NAICS reflects the structure of today's economy in the United States, Canada and Mexico, including the emergence and growth of the service sector and new and advanced technologies. It is a flexible system that allows each country to recognize important industries below the level at which comparable data will be shown for all three countries.

NAICS-based statistics.

Advance statistics will appear in early 1999. A report in 2000 will show relationships between NAICS and SIC industries. Implementation by Federal agencies will be in phases. Some agency programs will convert to NAICS as early as 1999, others as late as 2004.

How is NAICS better?

NAICS will make economic statistics more useful. It will improve basic benchmark and current performance statistics, like manufacturers' shipments, retail sales, and service receipts. It will improve statistics by providing an all-new industry classification system that is more:

Relevant. NAICS identifies new industries, revises concepts, and reorganizes classifications so that industry-classified statistics highlight businesses that contribute most to our economy.

Consistent. NAICS classifies businesses into industries based on one principle instead of several; the principle that businesses using similar production processes are classified together.

Comparable. NAICS provides the first-ever comparability in North American industry classifications and economic statistics.

Flexible. NAICS classifications will be updated regularly to keep pace with changes in our economy; every 5 years, all three North American countries will review NAICS and make needed revisions.

How NAICS will affect the data you use.

Every sector of the economy has been restructured and redefined:

- A new *Information* sector combines communications, publishing, motion picture and sound recording, and online services, recognizing our information-based economy.
- *Manufacturing* is restructured to incorporate high-tech industries, with a new subsector devoted to computers and electronics.
- *Retail Trade* is redefined. In addition, eating and drinking places are transferred to the new *Accommodation and Food Services* sector.
- The difference between Retail and Wholesale is now based on how each store conducts business.

For example, many computer stores are reclassified from wholesale to retail.

- Nine new service sectors and 250 new service industries are recognized.

All new numbering system

Numeric codes for each NAICS classification are completely different from those of the SIC. The new numbering system underscores the “clean slate” approach taken in NAICS and allows its classification changes to be fully developed.

The new system provides five levels of classification (up from four in the SIC), detailed codes that have a maximum of six-digits (up from four in the SIC) and detailed classifications called “U.S. Industry” (instead of “Industry” in the SIC). These changes require new numbers, even for industries that continue without change.

For example, both NAICS and SIC include the detailed industry, “Passenger car rental.” However, in NAICS, it has code number 532111, and in the SIC, it was code number 7514. While all NAICS numeric codes are new, like the SIC, they are organized into multi-level hierarchical classification groups that build up from the detailed industry level.

The additional level of classification and expanded number of digits permit NAICS to account for the increased number of classifications, provide flexibility in structuring industry classification groups, and allow for country-based variations in classification detail.

A variety of resources are available to help users of business statistics understand and use NAICS. Additional information, answers to frequently asked questions, and updated agency implementation plans are available at the Census Bureau's Internet site:

www.census.gov/naics

Answers to classification and data program inquiries may also be addressed to industry experts at:

Phone: 1-888-75NAICS

Email: naics@census.gov

Projection Methods and Economic Assumptions

The employment projection process consists of two phases: first, projections for employment by industry are made using both historical data and current information about the economy. Next, the industry projections become a primary source used to project changes in occupational employment.

Changes in occupational employment over time result from two principal sources: industry growth and technological change. In developing occupational employment projections, both of these components must be addressed.

The following is a discussion of how industry and occupational projections are developed, beginning with a description of data sources and followed by a description of the steps involved.

Principal Data Sources

Employment by Industry The source of the official historical industry employment series used for industry projections for the state and each county is the Current Employment Statistics (CES) program. This is a Federal/State cooperative program that compiles monthly estimates of industry employment groupings for the state and each county. These monthly industry employment estimates are based primarily on employer sample surveys.

A second source used in industry forecasts is the Covered Employment and Wage Data, or ES-202 program. Essentially, this program extracts employment and wage information from quarterly tax returns filed by each California employer covered by unemployment insurance. Each employer has been assigned a specific industry and county code and these data are compiled to provide the 'actual' industry employment levels for each industry and county. These data are then used for benchmarking the monthly industry employment estimates made in the CES program. This is also a Federal/State cooperative program.

Employment by Occupation Occupational employment estimates are based on survey data collected through the Occupational Employment Statistics (OES) program. The OES survey is an annual mail survey of nonfarm employers conducted by EDD in cooperation with the U.S. Bureau of Labor

Statistics. The survey is based on a sample designed to represent the universe of employers in each state. In California, data are collected for over 800 occupations at the three-digit SIC level of detail. The survey samples approximately 110,000 business establishments over a three year period.

The Process

Industry Projections Industry projections are first developed at aggregated levels (industry groupings) for the state and each county based on the Current Employment Statistics employment series.

Second, these aggregated industry projections are then broken down into more industry specific detail using the ES-202 data. The industry specific projections then become the primary source from which occupational projections are developed by using industry staffing patterns data. The following steps outline the process:

- Approximately every two years, industry employment projections are produced for the nation by the Bureau of Labor Statistics.
- Industry projections are then developed for the state using input from the national forecast and the historical industry employment series for the state.
- County industry projections are then developed using input from the state forecast and the historical employment series for each county.
- State projections are developed for ten years from the base period and county projections are developed for seven years from the base period.
- State forecasts are reviewed by LMID industry analysts, California's Department of Finance, and academics.
- County forecasts are reviewed by local area consultants who provide up-to-date information regarding recent developments in each county not normally accounted for in the model.

Occupational Projections The distribution of industry employment by occupation is performed in three steps.

- OES survey responses are summarized by industry and matched with appropriate SIC in the area. (In cases where local OES responses are not available, statewide responses or another area's responses are substituted.)
- The survey data are adjusted to total to the annual average employment level for each industry. This results in estimates of employment by occupation within the three-digit SICs for the base year.
- Finally, base year staffing patterns are adjusted to account for projected shifts in occupational distributions due to technological changes.

These projected changes are derived from special studies conducted by the U.S. Bureau of Labor Statistics. Applying these changes to the base year staffing patterns results in staffing patterns by three-digit SIC for the projected year. Projected year staffing patterns are applied to the industry employment projections to produce occupational employment projections within three-digit SICs. Data by occupation are then summed to get the occupational estimates. The difference between the base year occupation estimates and the projected year projections represents the job growth resulting from industry growth and from technological change. (Change factors do not try to predict regulatory changes.)

Demand for workers is also created by openings that result when workers leave jobs to enter other occupations, retire, or leave the labor force for other reasons. These openings, termed *separations*, are important because, in most occupations, they exceed job openings resulting from employment growth. Even occupations that are projected to decline usually provide job openings due to separations. Separations are developed from separation rates compiled on a national basis every two years by the Bureau Of Labor Statistics.

Economic Assumptions

The industry and occupational projections in this report are based on the following assumptions:

- The institutional framework of the U.S. economy will not change radically.
- Recent technological and scientific trends will continue.
- The long-term employment patterns will continue in most industries.
- Federal, state, and local government agencies will continue to operate under budgetary constraints.
- No major events, such as war, will occur that will significantly alter the industrial structure of the economy, the occupational staffing patterns, or the rate of long-term growth.
- Population growth rates and age distributions will not differ significantly from Department of Finance projections presently available.
- Attitudes toward work, education, income, and leisure will not change significantly.
